Outline

Introduction to Cellular Solids

Production of Cellular Metals

Behavior of Cellular Metals

Applications of Cellular Metals

Summary

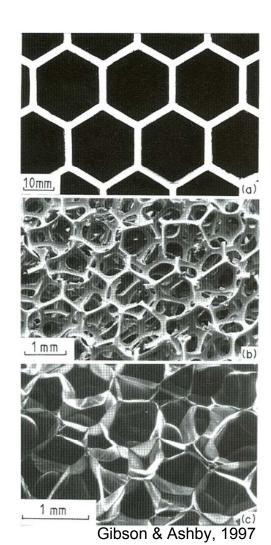

What is a cellular solid?

 Interconnected network of solid struts or plates that form edges and faces of cell

- Relative Density
 - Density of foam divided by density of solid
- Can be produced from wide variety of materials
 - -Polymers, ceramics, metals, food

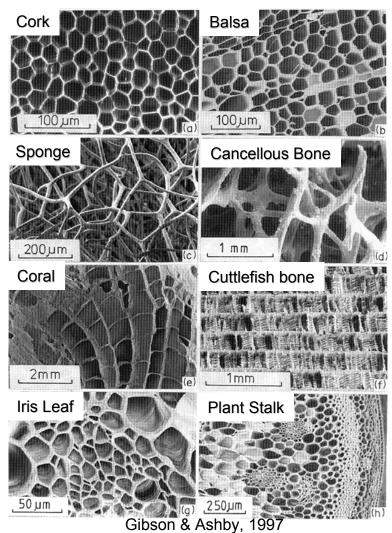

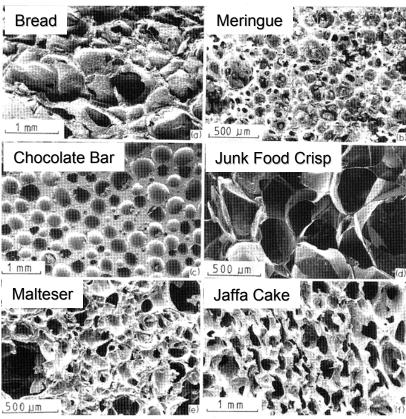

What is a cellular solid?

Natural Cellular Materials

Food Foams

Gibson & Ashby, 1997

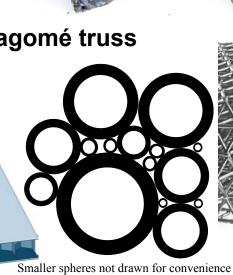

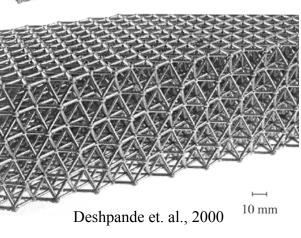

Topology of Cellular Metals

Inco Limited

- **Open-cell foam**
- Closed-cell foam
- **Hollow-sphere foam**
- Periodic/optimized truss structures
 - Octet, pyramidal, tetrahedral, kagomé truss
- **Hashin-Shtrikman Material**
- Honeycomb

Wadley et. al., 2003

Outline

Introduction to Cellular Solids

Production of Cellular Metals

Behavior of Cellular Metals

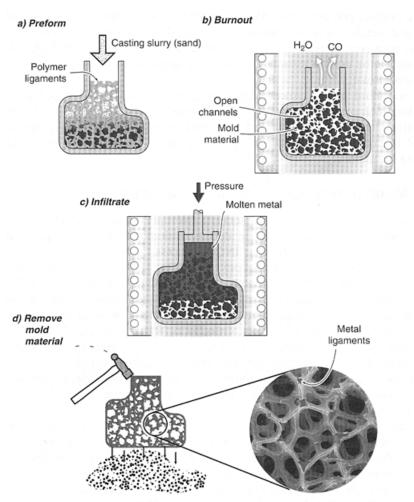

Applications of Cellular Metals

Summary

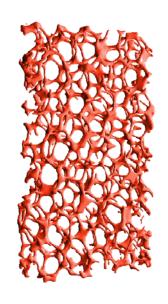

Open-Cell Foams:

Ashby et. al., 2000

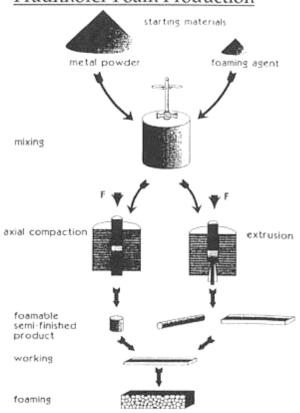

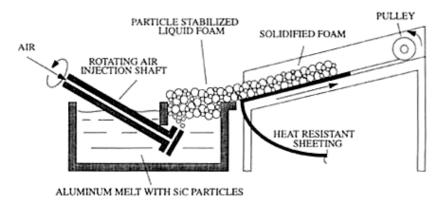

Closed-Cell Foams:

Fraunhofer Foam Production starting materials

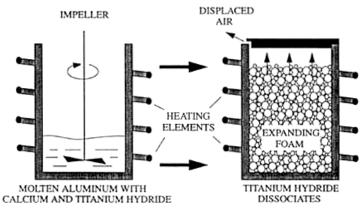

TiH₂ decomposes at 400°C $T_M = 660$ °C for aluminum Al, Zn, Pb, Ti foams

Alcan Al/SiC Foam Production

ALPORAS Foam Production

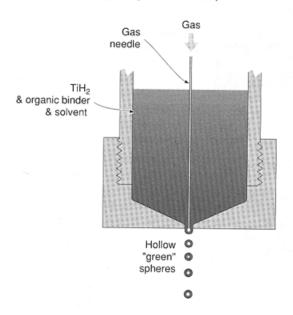

Hollow-Sphere Foams:

HOLLOW SPHERICAL POWDER SYNTHESIS

a) Slurry cast of hollow spheres

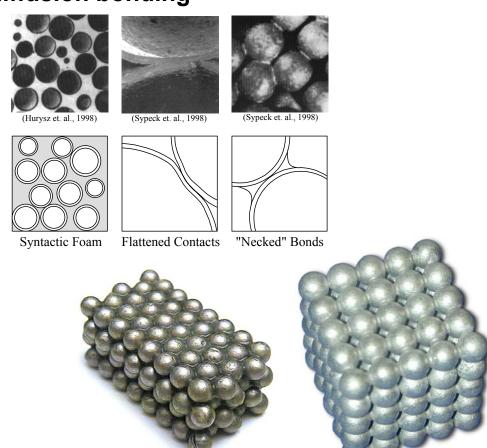

b) Hollow sphere metallization

Heat to evaporate solvent and binder, and decompose TiH₂

Ashby et. al., 2000

- Also produced via fluidized bed coating (ATECA) and mechanical forming/joining (Kaydon ITI)
- Joined using second phase (epoxy, solder) or diffusion bonding

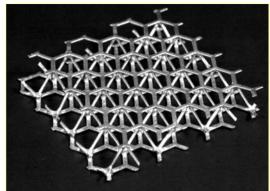

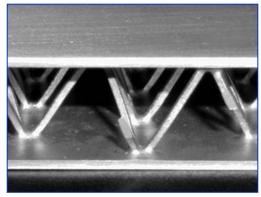

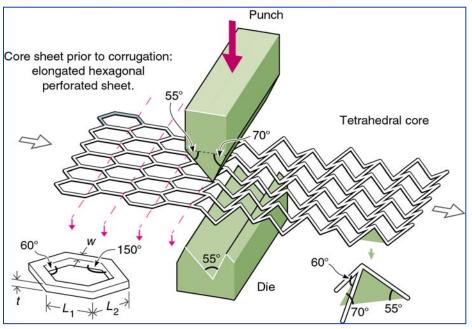

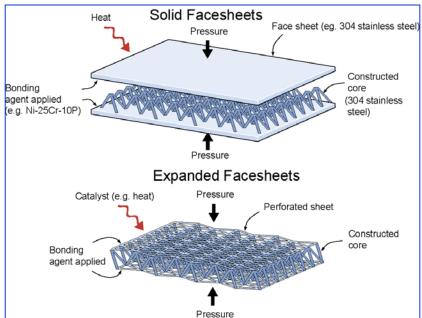

Truss Structures:

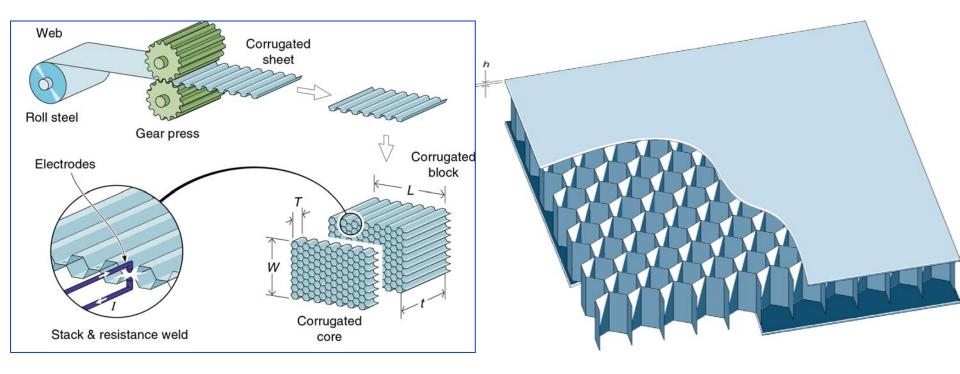

Wadley et. al., 2003

Honeycomb Structures:

• Includes hexagonal, square, and triangular honeycomb

Wadley et. al., 2003 Wadley et. al., 2003

Behavior of Cellular Metals

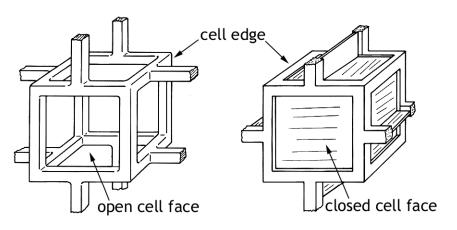

Applications of Cellular Metals

Summary

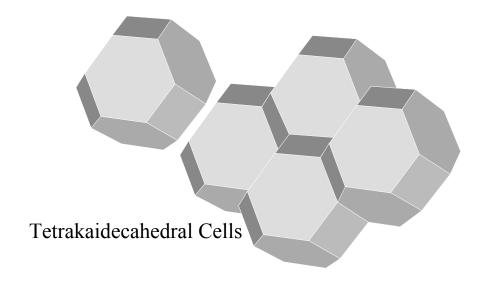

Stochastic Foams: Models

[Gibson and Ashby, 1997]

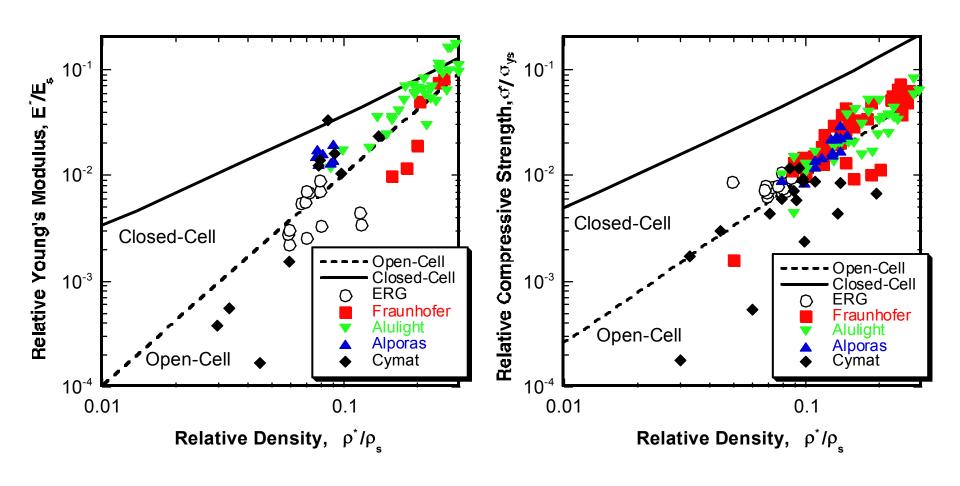

[Simone and Gibson, 1998]

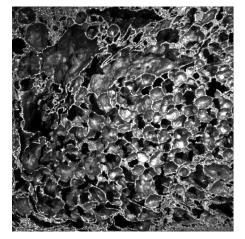

Stochastic Foams: Modulus and Strength

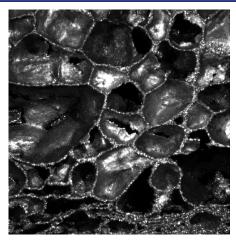

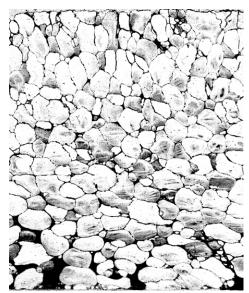

Stochastic Foams: Defects

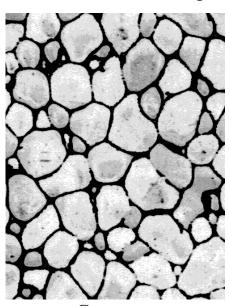

Non-homogenous cells

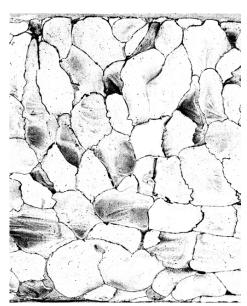

Torn/fractured cell walls

Liquid Drainage

Curvature

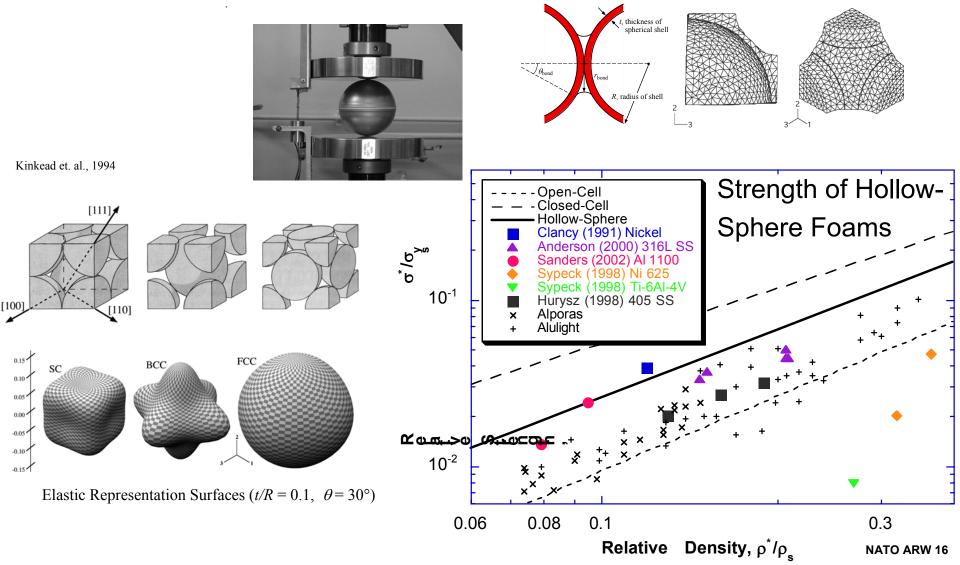

Corrugation

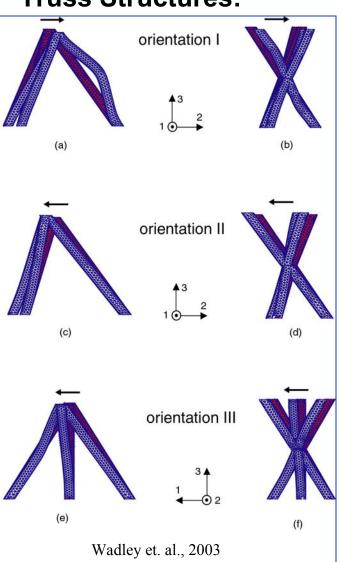

Hollow-Sphere Foams: Analytical, experimental, and FEM analysis

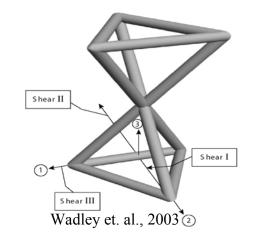

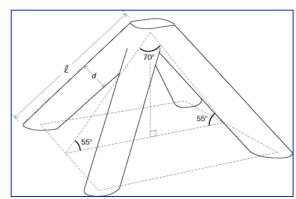

Truss Structures:

Wadley et. al., 2003

Topology	Elastic Modulus	Shear Modulus	Compressive Strength	Min Shear Strength	Max Shear Strength
	(E_{33}/E_{s})	(G ₁₃ /E _s)	(σ ₃₃ /σ _y)	(τ/σ _y)	(τ/σ _y)
Hexagonal Honeycomb	$1.00(\rho/\rho_s)$	0.14(ρ/ρ _s)	$3.22(\rho/\rho_s)^{5/3}$ **	-	$1.61(\rho/\rho_{\rm S})^{5/3}$
Diamond Textile	$0.25(\rho/\rho_s)$	= :	0.78(ρ/ρ _s)*	-	$0.5(\rho/\rho_{s})^{*}$
Square Textile	$0.50(\rho/\rho_s)$.	0.56(ρ/ρ _s)*	-	0.08(ρ/ρ _s)*
Diamond Hollow Tube	$0.25(\rho/\rho_s)$	-	$0.47(\rho/\rho_{s})^{*}$	-	-
Square Hollow Tube	$0.50(\rho/\rho_s)$	- 0	0.90(ρ/ρ _s)*	-	-
Tetrahedral	$0.44(\rho/\rho_s)$	$0.11(\rho/\rho_{s})$	0.67(ρ/ρ _s)	$0.24(\rho/\rho_{s})$	$0.27(\rho/\rho_s)$
Pyramidal	$0.25(\rho/\rho_s)$	$0.13(\rho/\rho_s)$	$0.50(\rho/\rho_s)$	$0.25(\rho/\rho_{s})$	$0.35(\rho/\rho_{s})$
3D Kagome	0.44(ρ/ρ _s)	-	$0.73(\rho/\rho_{s})$	$0.21(\rho/\rho_{s})$	$0.21(\rho/\rho_s)$

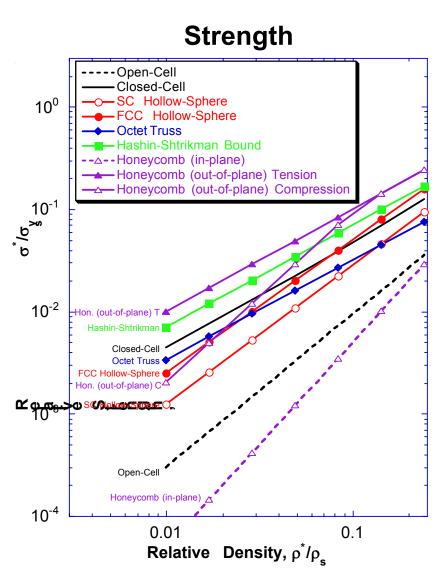

(*Experimental Results) (** Plateau Stress)

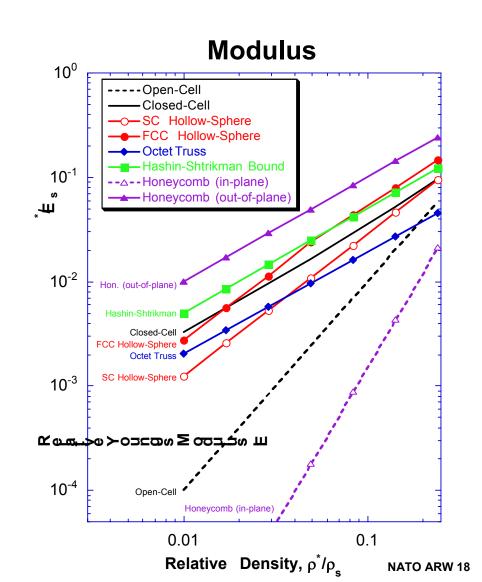

Wadley et. al., 2003

A Comparison:

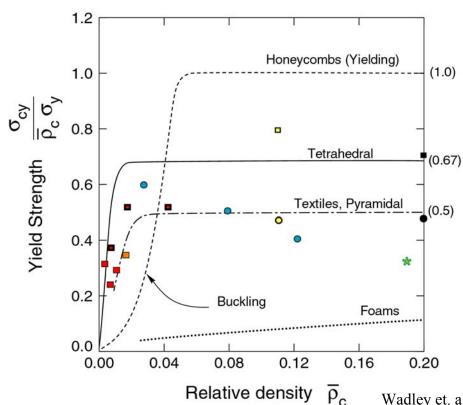

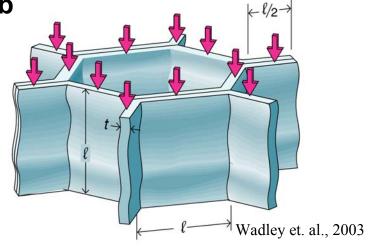

A Comparison: Drawback of honeycomb

- Pyramidal (304 SS)
- Tetrahedral (304 SS)
- * Diamond textile (304 SS)
- O Diamond hollow truss (304 SS)
- Diamond solid truss (304 SS)
- 0°/90° hollow truss (304 SS)
- 0°/90° solid truss (304 SS)
- Tetrahedral (Al6061-O)
- Bi-layer tetrahedral (Al6061-O)

Introduction to Cellular Solids

Production of Cellular Metals

Behavior of Cellular Metals

Applications of Cellular Metals

Summary

Cellular metals posses a unique set of properties

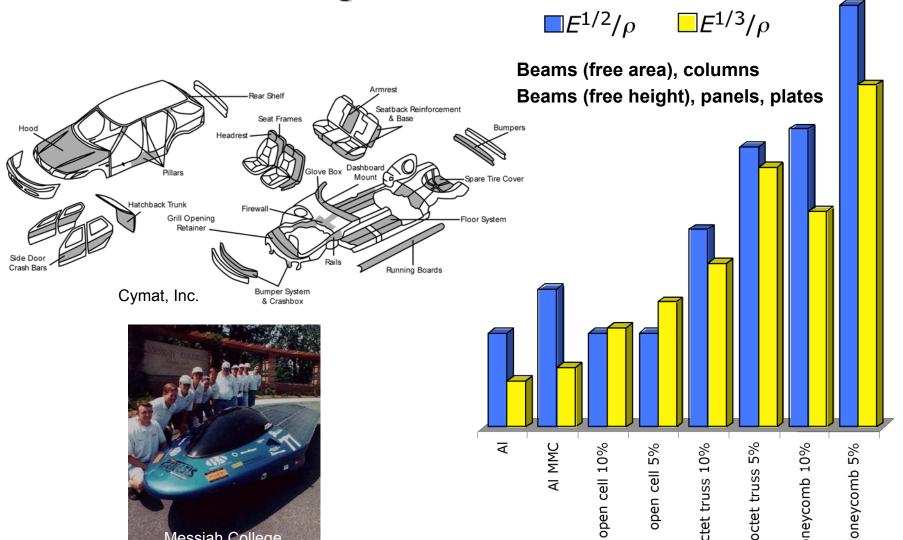

Lightweight Structures	Excellent stiffness to weight ratio when loaded in bending: attractive values of $E^{1/3}/\rho$, $E^{1/2}/\rho$, and $\sigma_y^{1/3}/\rho$ for panels, plates, beams, and columns.		
Sandwich Cores	Low density with good shear and fracture strength.		
Mechanical Damping	Damping capacity of metal foams is up to 10X larger than that of solid metals.		
Vibration Control	Cellular metal panels have higher natural vibration frequencies that solid sheet of the same mass per unit area.		
Acoustic Absorption	Reticulated structures (open porosity) have sound absorbing capacity.		
Thermal Management	Open-cell structures posses large surface area and high cell wall/strut conduction for exceptional heat transfer ability		
Energy Absorption	Cellular metals have exceptional ability to absorb energy at almost constant pressure: crash protection, blast protection		

Stiffness limited design at minimum weight

Behavior of Cellular Metals

Applications of Cellular Metals

Summary

Summary

- A range of cellular metals presented as a structural concept, independent of material properties
 - Stochastic foams, hollow-sphere foams, periodic trusses
- Cellular metals posses high structural efficiency that provides added benefits over a fully dense material
- Lightweight structure used in application will depend on manufacturability and cost of each process
- Range of properties of cellular metals allows multifunctional use beyond simple structural concepts
 - Allows for further weight savings

Nature has a magnificent way of achieving great structural feats using only limited resources!
